

France 5

The project

- Digitalise all programmes that are property of **France5** in order to make them available via the Internet to any **France5** partner who has the rights to access them.
- Associated metadata for programme consultation are brought in from a dedicated database.
- Compilations can be created using programme extracts, or the entire programme, which allows the links to be viewed.

Manreo solution

- A low speed encoding system piloted by Media Management.
- Storage in low speed bandwidth with an expiry date equivalent to that of the end of the copyright.
- Browser includes full text and advanced searches.

Product benefits

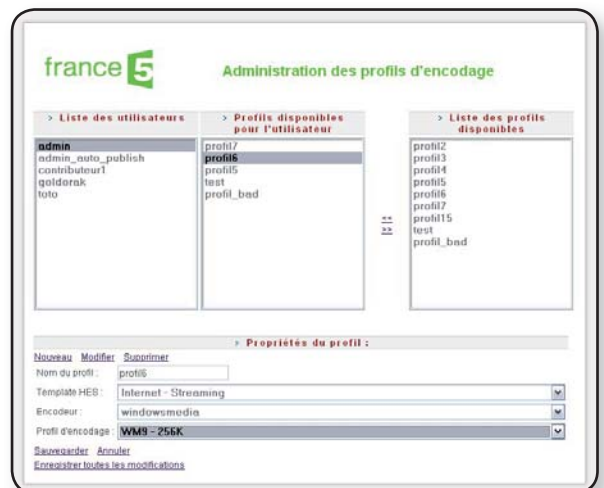

- An archive that can be consulted via the Internet.
- Load balancing technology is used to distribute transfer and encoding requests from high-speed digital files to be broadcast.
- Fast video search.
- Automation of the low speed production chain by the systematic transcoding of any new high-speed video detected by **France5** Media Management.

Benefits

- Great time saving in video access.
- All **France5** staff can easily access the archives via Internet.
- Low speed bandwidth programmes used for subtitling and to create other low speed versions to be streamed on **France5** website.

SEARCH RESULTS.

ENCODING ADMINISTRATION.
